

CMP2804 Team Software Engineering A02 2025-2026

Learning Outcome	Criterion	Pass	2:2	2:1	1st
LO1: Understand and apply effective team-based skills, including design methodologies, time and resource management in a simulated commercial setting. LO2: Demonstrate the use of significant programming techniques and algorithms appropriate for the development of commercial digital products. LO3: Employ best practices in software engineering including standards adherence and version control, and the use of appropriate development strategies. LO4: Employ ongoing reflective analysis and evaluation to inform design and development decisions and critically appraise a software artefact. LO5: Evaluate the potential ethical, legal, social, and professional concerns of commercial digital products, and reflect on the impact that these factors may have on a developed artefact	Software Engineering [Poster](20%)	The team have detailed some of your software engineering decisions and process in the poster, but this is poorly justified.	The team have detailed your software engineering decisions and process in the poster. The decisions the team have made may not be ideal for your project, but some attempt at justification has been made.	The team have made good software engineering decisions, and your process is clearly justified in the poster. The team have detailed an approach to project work that would be suitable in a commercial setting.	The team have made good software engineering decisions, and the process is clearly justified in the poster. The team have detailed an approach to the project that would be suitable in a commercial setting. In addition, alternatives have been considered.
	Implementation and Artefact (40%)	The team has produced an incomplete artefact, for example, the sprints were not completed or the artefact does not conform to the aim of the project. The process is documented in the poster but focusses on the end product for example. The artefact documentation is included, but it is not clear or helpful. The team have produced a short video that details the artefact in operation.	The team have produced an artefact that works and has clear engagement from each member of the team. The artefact is complex or developed enough to justify a year-long engagement from a team of students, but may have elements that are unfinished. The team process is described in the poster. The artefact is documented. The team have produced a short video that details the artefact in operation.	The team have produced a completed artefact that has clear engagement from each member of the team and is reflected in the sprint reviews. Core elements of the artefact are polished and presentable as you would expect from a completed project. The team process is documented well in the poster and reflected on the sprint reviews. Important decisions have been justified with clear references to literature or industry standards. The artefact is documented with clear guidance. The team have produced a short video that details the artefact in operation, which could be used to promote the project.	The team have produced a completed artefact that has clear engagement from each team member. It is clear through the sprint reviews how each team-member's skills have been best utilised as a resource within the development of the artefact. Core elements of the artefact are polished and presentable as you would expect from a commercial project. The team process is excellently documented in the poster and reflected on the sprint reviews. Important decisions have been justified with clear references to literature or industry standards. The artefact is well documented with guidance and instruction. The team have produced a short video that details the artefact in operation, which could be used to promote the project.

	Evaluation [Poster] (10%)	The team have undertaken an evaluation of their artefact and	The team have undertaken an evaluation of their artefact and	The team have undertaken an evaluation of their artefact and	The team have undertaken an excellent evaluation of their artefact and shown in

		shown in the poster. This appears to be rushed or may focus largely on problems.	shown in the poster. The evaluation is good, and describes positive elements and areas for improvement, but lacks detail.	shown in the poster. The evaluation provides a detailed discussion of their artefact. The evaluation is critical, and identified areas that could be developed should they continue to work on the project.	the poster. The evaluation provides a detailed discussion of their artefact. The evaluation is critical, and identified areas that could be developed should they continue to work on the project.
	Legal, Social, Ethical, Professional Issues [Poster] (10%)	The team has provided some reference to LSEPI consideration in the poster.	The team has provided LSEPI consideration in the poster. Ethical frameworks and standards have been used to explore and frame the project. A professional code of conduct has been identified as relevant.	The team has provided LSEPI consideration in the poster. Furthermore, as well as identifying relevant ethical frameworks, the team has shown some compliance with relevant professional ethical and professional codes of practice.	The team has provided LSEPI consideration in the poster. The team has very clearly shown complete compliance with relevant professional ethical and professional codes of practice.
	Group Work Reflection [Poster] (10%)	There is some group work reflection in the poster, however this dwells largely on negative and aspects of your group engagement.	You have produced a group reflection in the poster which identifies strengths and areas that need improvement.	You have produced a group reflection in the poster that is critical and identifies strengths and identifies areas that need improvement.	You have produced a cohesive critical reflection in the poster which details both the group's overall engagement, but also reflects on the performance of individual group members. The reflections are clear, and provide scope for an action plan that could improve the group's performance.
	Blackboard Journal Sprint Reviews [Individual] (10%)	Three reflective journal entries as Sprint reviews for Sprint 2, 3 and 4. They are brief and provide little insight into the process.	Three reflective journal entries as Sprint reviews for Sprint 2, 3 and 4. They are mostly descriptive and make little reflection on the process.	Three reflective journal entries as Sprint reviews for Sprint 2, 3 and 4. They provide some detail regarding the sprint deliverables, and the issues faced.	Three reflective journal entries as Sprint reviews for Sprint 2, 3 and 4. They are insightful and provide a lot of detail regarding the sprint deliverables, and the issues faced.
Weighting is 65% of the module
