Level Design Tutorial

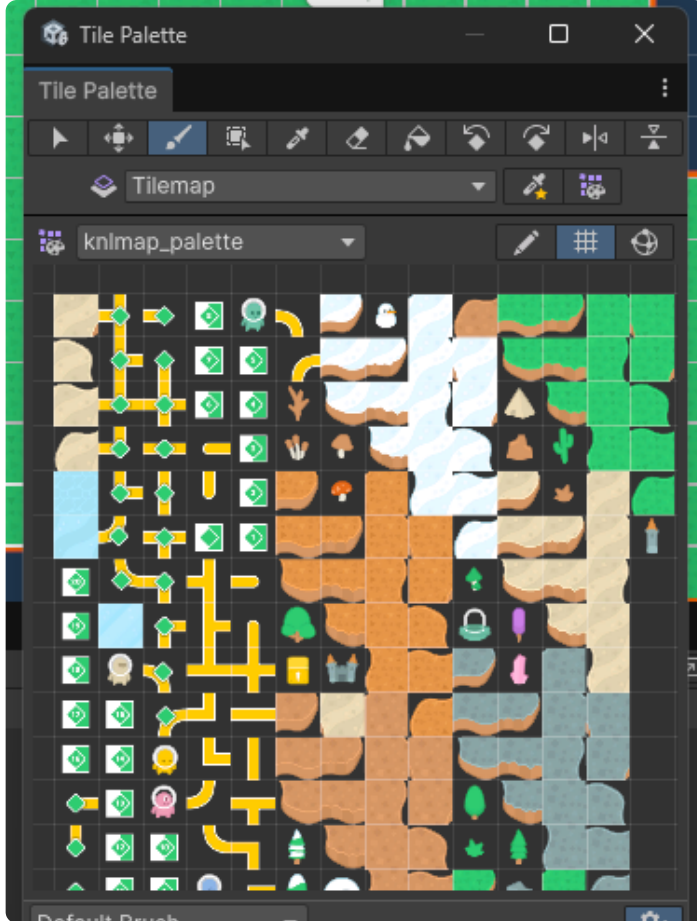

Please contact [@newwby](#) if any issues or need clarification on anything!

How to clone repo/get unity working instructions are available on the handout [@MasaMesgho](#) made - please ask if you're having any difficulties.

Setup

1. Clone the projectMain repo and open in the project Unity version (6000.0.55f1) - it is confirmed this works on uni lab computers
2. In Assets > Prefabs > LevelBuilding you will find all prefabs to work with.
3. Load 'level_prefab' and (IMPORTANT) save it as a new prefab with the level name, *in Assets/Levels/GameLevels*.

Exit Criteria

Your level requires:

1. One player
2. One camera
3. Walkable tilemap
4. Collectables
5. Make sure you follow the brief level theme/difficulty goal - ask if you have any questions
6. Save your level to ./Assets/Prefabs/GameLevels

Remember to commit and push your changes to GitHub.

Layer Guide

Ignore this unless you've been asked to work with Z-Levels, but it provides implementation background information.

Hierarchy

WorldGrid

- Layer
- Tilemap

- Tilemap is where you draw from tile palette
- Layer needs the public property 'Z level' set
- Z Levels should be sequential - jumps only happen in increments of 1, levels need to support this climbing
- Players can't move up Z levels but they can move down them (WIP - to be implemented)
- Naming convention for layer should be 'LayerZ' where Z is the int for Z level (e.g. '1')
- Naming convention for tilemap should be 'TilemapZ' where Z is the int for Z level (e.g. '1')
- Tilemap sorting layer should be 'World'
- In order to draw in editor you may need to set 'order in layer' for the tilemap or it won't render correctly whilst you're drawing - if you forget to do this or do it incorrectly the editor will set this based on the Z level property of the Layer at runtime. If you experience any unexpected results with runtime appearance versus in-editor confirm your Z levels are correct.

Author ...

There is a collectable goal prefab to drag onto level now
Collectables do need a level reference set but will try make this auto-populate before complete
You don't need to look at elevation tilemaps or drawing on multiple tileset layers unless told to
