

University of Lincoln Assessment Framework

Assessment Briefing Template 2025-2026

1. Module code & title	CMP2804M Team Software Engineering
2. Assessed learning outcomes	• [LO1] Understand and apply effective team-based skills, including design methodologies, time and resource management in a simulated commercial setting • [LO2] Demonstrate the use of significant programming techniques and algorithms appropriate for the development of commercial digital products. • [LO3] Employ best practices in software engineering including standards adherence and version control, and the use of appropriate development strategies. • [LO4] Employ ongoing reflective analysis and evaluation to inform design and development decisions and critically appraise a software artefact • [LO5] Evaluate the potential ethical, legal, social, and professional concerns of commercial digital products, and reflect on the impact that these factors may have on a developed artefact
3. Assessment title	Assessment 2
4. Contribution to final module mark (%)	65%
5. Description of assessment task	This is Assessment 2 and is a group assignment. In this assessment you will submit: 1. A summary of the project in the form of an A1 poster, written as a group, which includes the following sections: a. Introduction b. Software Engineering c. Implementation d. Evaluation e. Legal, Social, Ethical, Professional Issues f. Group Work Reflection g. Artefact Github/Version Control Repository (Links) h. References 2. Artefact Documentation. 3. Short (up to 5 minutes) Panopto video showcasing the artefact.

4. Three Blackboard journal entries as reflective sprint reviews for sprints 2, 3 and 4 **written as an individual** (see Additional Information)

Only one member of the team should submit the poster, documentation, video.

Introduction

Introduces the poster reader to the project. It describes the importance of the project and what it hopes to achieve. The requirements for the project, it's aim and objectives should also be described here.

Software Engineering

It describes your software engineering strategy and how you have used version control in your project (with repo URLs for example). You should include a discussion of what software development approach you took (Kanban, Scrum, XP, Spiral etc) and why you felt that strategy was appropriate for your project.

You should also include diagrams regarding how your software was constructed, including references to any dependencies or libraries.

Implementation

Your implementation section should clearly explain what you have built, and how you have built it. You must justify the approach you have taken, and the toolsets you have chosen to use.

Evaluation

You should include a detailed verification and validation of the project outputs. For example, metrics identified in the Proposal should be used to provide some sort of context to the quality of the implementation, while a comparison with the requirements, aims and objectives will allow the assessment of the success of the project.

Legal, Social, Ethical, Professional Issues

There should be an analysis of the relevant LSEP issues which addresses concerns and issues which arose during the development of the artefact, and how the team took these into account. It should also describe how your team behaved and acted professionally during the project.

Group Work Reflection

In this section we will expect a co-authored reflection on how your group has worked together throughout the project. You should include some discussion about your successes, as well as areas that you could improve. This should be an honest and critical statement.

	The artefact documentation should be in a descriptive style and should contain: • A brief description of the artefact, its aim and goals. • The instructions for use. <u>Additional Information</u> The Sprint Review Blackboard Journal entries should review the previous sprint or iteration: • Summarise what was completed and by whom. • What went well/not as well (why? Can it be improved?) • What tasks are next and who is doing them? Suggestions for the Sprint Reviews and Outcomes are: • Sprint 2 (Sem A week 10-12, Formative Deliverable: Minimum Viable Product) • Sprint 3 (Sem B week 6, Formative Deliverable: Artefact) • Sprint 4 (Sem B week 10 – 12, Assessment Deliverable: Artefact, documentation, poster) The Panopto video should be no more than 5 minutes in length. It should showcase and promote the artefact by showing it in use - ideally with a complete end-to-end operation. For example, this could be in the style of a promotional video. For disagreements regarding the allocation of contribution percentages, please see the CMP2804 Dispute Resolution document.
6. Assessment submission instructions	<u>One</u> member of your team should submit the poster, artefact, documentation and the Panopto video URL. All team members will get a subsequent grade based on the submission and the peer assessments. A zip file containing all of this should be submitted by the deadline to CMP2804M Assessment 2 Supporting Documents Upload. In addition to this, each team member should submit the peer assessment form containing their assessment of the other team members. This form should be submitted to CMP2804M Assessment 2 Supporting Documents Upload. Individual marks will then be adjusted based on these values.
7. Date for return of mark and feedback	Please see the Hand In Dates.xls spreadsheet.

	Note: <i>all marks awarded are provisional until confirmed by the Board of Examiners.</i>
8. Feedback format	Blackboard feedback, direct verbal feedback in the poster presentation session.
9. Use of Artificial Intelligence (AI) in this assessment	You <u>may not</u> use Artificial Intelligence (AI) in this assignment. <i>This means that you may not use any AI technologies including Grammarly, CoPilot, QuillBot and others. If you are not sure whether you should be using a particular tool then ask the Module Team.</i>
10. Marking criteria for assessment	A Criterion Reference Grid (CRG) is used to evaluate your learning against a set of pre-defined criteria. <i>Please note that all work is assessed according to the University of Lincoln Management of Assessment Policy and that marks awarded are provisional on Examination Board decisions which take place at the end of the Academic Year.</i>
11. Important Information on Dishonesty, Plagiarism and AI Tools	University of Lincoln Regulations define plagiarism as '<i>the passing off of another person's thoughts, ideas, writings or images as one's own...</i>'. Examples of plagiarism include the unacknowledged use of another person's material whether in original or summary form. Plagiarism also includes the copying of another student's work'. Plagiarism is a serious offence and is treated by the University as a form of academic dishonesty. For more information on examples of Academic Offences, please see the Academic Offence Guidance. The use of AI tools: <u>Not Permitted</u> Please note, if you use AI tools in the production of assessment work where it is not permitted, then it will be classed as an academic offence and treated by the University as a form of academic dishonesty. Students are directed to the University Regulations for details of the procedures and penalties involved. For further information, see www.plagiarism.org
