

# Meeting 13 - 13/02/26 #97

Closed

## Meeting Details

Date: 13/02/2026  
Time: 1-30pm  
Attendees: @newwby @29576302 @ShawnCrisMartin  
Location: INB Games Lab

## Agenda

1. Unity training session with @MasaMesgho
2. Review team task progress in sprint 3a - mid-week of sprint almost complete, cannot play catch-up during sprint 3b week 1 due to FSD assignment
3. Highlight importance of paper drafting
4. Team paper draft interface design and discuss screen real-estate
5. Team review of learning/memory implications on design (UXD module)
6. Discuss next steps of grievance process with absent team members

## UXD Discussion Notes

Discussed UXD memorisation and learning adherence topics (brought up during this week's UXD lecture) and their relation to our project.

| Topic                                                     | Discussion Summary                                                                          |
|-----------------------------------------------------------|---------------------------------------------------------------------------------------------|
| Consistency with existing standards improves memorability | Matched by our placement of game interfaces in relation to programming interfaces           |
| Recognition is easier than recall                         | We're using easily identifiable icons that mimic scratch (a popular game in the same genre) |

| Topic                                                                                   | Discussion Summary                                                                                                                           |
|-----------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| Meaningful feedback improves understanding & Multi-modal cues (audio + visual feedback) | We're planning vibration and sounds for button/task feedback                                                                                 |
| Avoid information/option overload                                                       | We're reducing movement and jump blocks to a single of each, with turn blocks. We're also using icons and not coding terminology for blocks. |
| Reduce requirement for memory load                                                      | We're planning a display/viewport when the palette window is opened.                                                                         |

## Other Discussion Notes

| Topic                   | Discussion Summary                                                                                                                                                                                                                                                     | Action Items                                                                                     |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| Unity training          | <a href="#">@MasaMesgho</a> unable to attend meeting, postponed until next week                                                                                                                                                                                        |                                                                                                  |
| Coding block sprites    | Design is difficult with unity tools, suggested to implement separate sprites rather than modifiable sprite due to limited blocks.                                                                                                                                     | <a href="#">@29576302</a> to complete                                                            |
| Coding block icons      | Using icons on coding block sprites to show functionality - arrow loop for 'for loop' blocks, infinity sign for 'while loop' blocks, boot for 'move' blocks, air cloud for 'jump' blocks, arrows for 'turn left/right' blocks.                                         |                                                                                                  |
| Interface design        | Several mockups drawn and discussed for layout of block console, workspace, and palette                                                                                                                                                                                | <a href="#">@29576302</a> to complete interface tasks with <a href="#">@ShawnCrisMartin</a> help |
| Information visibility  | Coding block customisation to be set by long press to prevent crowding of limited screen real estate. Swipe commands to be used to access block palette/workspace (swipe down), and full console (swipe up). Console to be on-screen in a shrunk version at all times. |                                                                                                  |
| Information persistence | Shrunk display/viewport of the level, akin to a mini-map, to be shown on block palette/workspace menus to aid player with memory                                                                                                                                       |                                                                                                  |
| Pending work loads      | Team discussed work structure for next two weeks, important that all tasks are completed this sprint due to pending assignments.                                                                                                                                       |                                                                                                  |
| Assignment date updates | Gantt to be updated for changes in assignment dates.                                                                                                                                                                                                                   | <a href="#">@newwby</a> to complete                                                              |
| Team member absence     | No response from <a href="#">@munaxshe</a> and <a href="#">@FAVOURIGBOKO</a> - per the team contract team members are to issue a group warning in the team Discord, and by university email, that the absence is to be discussed next meeting.                         | <a href="#">@newwby</a> to complete                                                              |

## Action Items

- ☐ Coding block sprites - assigned to [@29576302](#) ...
- ☐ Interface design tasks - assigned to [@29576302](#) & [@ShawnCrisMartin](#) ...
- ☐ Gantt to be updated for changes in assignment dates - assigned to [@newwby](#) ...
- ☐ Issue a group warning in the team Discord, and by university email, that the missing team member absence is to be discussed next meeting - assigned to [@newwby](#) ...

## Next Meeting Action Items

- Unity training session with [@MasaMesgho](#)
- Review of grievance process with regards to [@munaxshe](#) & [@FAVOURIGBOKO](#)
- Arrange supervisor meeting
- Review of sprint 3a tasks due to imminent end of sprint

## Future Action Items

- [@newwby](#) to prepare sprint 3b task list before meeting 15

## Additional Notes / Links

### ► Full Discussion Notes

coding block design difficult in unity, may just create separate sprites

Borisz working on basic object for code block palette, Shawn to assist in week 3 of 3a due to heavier work load

Can't fall behind

update gantt for new schedules

block interface discussion for loops

simple blocks, customisable repeats

icons rather than words

on coding blocks

arrow loop for For blocks visually

boot for movement forward visually

air cloud for jumping forward visually

arrows for turn left/turn right blocks

infinity sign for while blocks visibly

long press for hover tip information

swipe top to workspace  
console swipable from bottom  
mini view of the level on the menu  
stretch goal for minimap-style mini icons on the viewport view

If a team member is not communicating for two weeks, team members are to issue a group warning in the team Discord, and by university email, that the absence is to be discussed.
